Wireless Control Pendant

Pro-Safe Mobile Training Unit is capable of being operated with our Wireless Operator Control. This is an optional item and the PLC Control Panel with diagnostics screen is still included as standard on all Pro-Safe live fire training devices.

The wireless operator pendant is capable of controlling all fire generation (including pilot), smoke generation, burn chamber ventilation, emergency stop control, and dead man function. Enabling the wireless pendant allows for mobility of the operator as they can now leave the control panel and operate all functions from within the burn chamber while viewing trainees.

TRAINING TODAY'S HEROES.
